

RoHS3 Certification

This certification is in reference to the European's Union's (E.U.) request for compliance to the restriction of Hazardous Substances (RoHS3) directive to the best of our knowledge based upon published specifications and information provided by our suppliers. The RoHS directive (2015/863) banned the use of ten metals in electronic products sold in Europe beginning July 22, 2019 with threshold levels:

Cadmium 0.01% Hexavalent Chromium 0.1% Lead 0.1% Mercury 0.1% Polybrominated Biphenyls (PBB's) 0.1% Polybrominated Diphenylethers (PBDE's) 0.1% Bis(2-ethylhexyl) phthalate (DEHP) 0.1 % Butyl benzyl phthalate (BBP) 0.1 % Dibutyl phthalate (DBP) 0.1 % Diisobutyl phthalate (DIBP) 0.1%

Since our products are designed to monitor and control substances in the environment, one of our biggest concerns is having minimal environmental impact. Flowline has decided to manufacture all new products within the specified guideline. All components and materials purchased for inclusion in our products are RoHS3 compliant.

If you have any further question, please feel free to contact me.

Sincerely,

Thuan Nguyen
